Subject: Feedback

I have lived and worked in Parrsboro for many years and have always seen our community struggle economically, ever since the Trans Canada highway by-passed our community around 1964. The main employer (Scot Paper) pulled up stakes in 1992 and hit the community hard again and put alot of us out of regular employment. Well alot of people moved away to find work which put a strain on the tax base, and I was one of those persons. I am very excited to hear the possibility of in stream tidal power coming to our area. The subject has been talked about for years and years and now we have the opportunity to actually gather the facts that would back up a full time Tidal Energy Project that would benefit a large area and the economics of the community and Province.

I had to move away after the mill closed down in the early 90's, to find work. I have moved back to Parrsboro in hopes of renewing my love for this area and the idea of Tidal Power Generation has got me enthused to live here. I am an Industrial Electrician who lives in a place where there is very little industry. The benefits of In-Stream Tidal Power may not be seen for quite some time but I would hope that it will benefit the future of the Province and our little town. The project will create some work for us locals and we need it, especially me. I think we all want to contribute to greener energy at an efficient cost and little impact to our socio-economic well being. I for one will give all the support I have for this project to prove it is going to be a worthwhile investment.
